

Description:

Create a four page website that shows a small history intro about HTML, CSS, and Javascript.

1. Create a **/three-page-history/index.html** file which will be the homepage of the website.
2. Add the header structure as html as shown in the **index.html.png**.
3. Create a generic **/three-page-history/styles.css** file in the project.
4. Link the css file in the **index.html**.
5. Style the header as shown in the **index.html.png** file in the css file.
6. Add the main structure which contains a heading and a simple paragraph.
7. Style the main structure as shown in the **index.html.png** (using padding, width)
8. Point the text from the header and main structure to these urls:
 - a. HTML history to **./html-history.html**
 - b. CSS History to **./css-history.html**
 - c. Javascript History to **./javascript-history.html**
9. Create the **/three-page-history/html-history.html** file. Add the content. Add the classes you have used previously in the **styles.css**.
10. Do the same for **css-history.html** + **javascript-history.html**
